AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q76642

Application No.: 10/625,527

MENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): A pressure-sensitive adhesive sheet comprising:

a composite film eomprised by comprising a composition containing a urethane polymer

and an acrylic polymer, wherein the urethane polymer and an acrylic polymer are present as

individual components and/or are bonded together as effective components:

a first film comprising a material different from that of the composite film, the first film

laminated on one side of the composite film;

a pressure-sensitive adhesive layer formed on the other side of the composite film.

wherein the first film is made of at least one resin selected from the group consisting of

polyethylene terephthalate, polyethylene, polypropylene, polyimides, polyether ether ketones,

polyvinyl chloride resins, polyvinylidene chloride resins, polyamide resins, and polycarbonate

resins, and

wherein the pressure-sensitive adhesive sheet has a modulus of 9 N/mm2 or more and

250 N/mm2 or less when an oblong piece of the pressure-sensitive adhesive sheet with a width of

20 mm is bent at a radius of curvature of 3.0 mm-and

wherein the pressure-sensitive adhesive sheet is used during a process of processing a

semiconductor-product.

2. (original): The pressure-sensitive adhesive sheet as claimed in claim 1, wherein the

pressure-sensitive adhesive sheet has a modulus of 15 N/mm2 or more and 250 N/mm2 or less

2

AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q76642

Application No.: 10/625,527

when an oblong piece of the pressure-sensitive adhesive sheet with a width of 20 mm is bent at a

radius of curvature of 3.0 mm,

3. (canceled).

4. (currently amended): The pressure-sensitive adhesive sheet as claimed in claim 1,

wherein the composite film comprises a film obtained by reacting a polyol and a polyisocyanate

in a radical polymerizable acrylic monomer to form a-the urethane polymer, coating a mixture of

the urethane polymer and the radical polymerizable acrylic monomer on the first film and

irradiating a radiation onto the coating to cure it.

5. (original): The pressure-sensitive adhesive sheet as claimed in claim 4, wherein the

radical polymerizable monomer is an acrylic monomer.

6. (original): The pressure-sensitive adhesive sheet as claimed in claim 1, wherein the

composite film has a storage modulus at $25^{\circ}\mathrm{C}$ of less than 2.0×108 Pa and a storage modulus at

100°C of 3.0×105 Pa or more.

7. (original): pressure-sensitive adhesive sheet as claimed in claim 6, wherein the first

film has a storage modulus at 25°C of 2.0×108 Pa or more.

3

AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q76642

Application No.: 10/625,527

8. (original): The pressure-sensitive adhesive sheet as claimed in claim 7, wherein the

first film has a thickness (t1) of 10 μm or more and 200 μm or less and the composite film has a

thickness (t2) of 10 µm or more and 300 µm or less, and wherein a ratio of the thicknesses (t1/t2)

is t1/t2 = 0.1 to 10.

9. (canceled).

10. (original): The pressure-sensitive adhesive sheet as claimed in claim 1, wherein the

first film has a thickness (t1) of 10 µm or more and 200 µm or less and the composite film has a

thickness (t2) of 10 µm or more and 300 µm or less, and wherein a ratio of the thicknesses (t1/t2)

is t1/t2 = 0.1 to 10.

11. - 19. (cancelled).
